

NEON STRIPS

What is Neon Strips?

Neon strips are flexible LED light strips that mimic the look of traditional neon lights. They use LEDs inside a soft, frosted silicone or PVC cover, so the light appears as a smooth, unbroken glowing line. Neon strips are easy to bend and shape, come in many colors, and are commonly used for creative lighting, signage, and decoration, both indoors and outdoors. Compared to glass neon, they are safer, more energy-efficient, and easier to install.

NEON FLEX SOLUTION

Cable outlet

Waterproof ring

Metal ring

Integrally extruded Max length up to 50meters with one end power

Cutting mark

IP67 cable connector

Male

Female

Mounting Accessories

Mounting Clip

Mounting Profile

Moldable Groove

IP PROCESS TECHNOLOGY

IP67
(Screwless end cap)

IP67
(Standard silicone end cap)

IP67
(Seamless end cap)

IP68
(Siliconeneon)

IP68
(PU neon)

Linear interconnection without dark area

Curve interconnection of lighting outward without dark area

Curve interconnection of lighting outward without dark area

IP68 silicone neon and IP68 PU neon, used under the water.

Pool
IP68 silicone neon: s 5 meters deep
IP68 PU neon: s 3 meters deep

PRODUCTION PROCESS COMPARISON

Comparison of integrated extrusion and hollow tubing methods for neon flex.

Integrated extrusion neon

With the LED strip encased in silicone, it remains secure and stable, ensuring uniform and consistent lighting.

Supports lengths up to 50 meters.

The structure is stronger and feels more reliable

Integrated extrusion with a specified light source ensures more stable quality and consistent parameters

Difficult to support multiple models with low quantities per model.

VS

Hollow silicone tube

Without being integrated with the silicone tube, the strip may loosen or shift, leading to light dots and uneven brightness.

Maximum length typically 5 meters.

The structure is weaker and feels softer.

Independent production results in slightly less stable product quality and parameters.

Ready-to-stock production offers greater flexibility for customization

SURFACE TREATMENT PROCESS

Before surface treatment

Glossy, attracts dust easily, and is hard to clean.

After surface treatment

Anti-static, dust-resistant, dirt-repellent, with a matte finish, tactile texture, and easy to clean.

After surface treatment and with prolonged use

Before cleaning, it significantly reduces light output.

After cleaning, it becomes clear and transparent, providing uniform light distribution.

ADVANTAGES OF TRI-COLOR EXTRUSION

Environmentally friendly packaging

Package

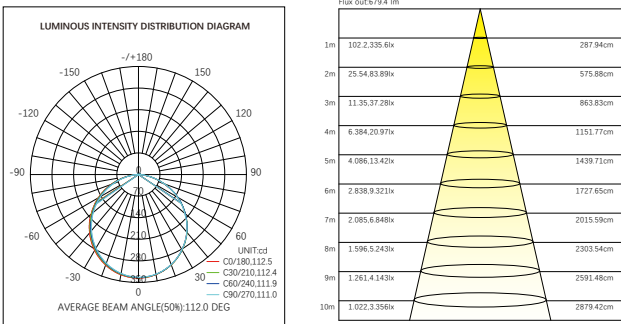

Neon N1313

Features

- Top & side free-bend neon light;
- Tricolor-color silicone extrusion+flexible FPC+highlight LED;
- Mild and even light output;
- Hollow inside, protect LEDs well;
- High light transmittance;
- Cuttable;
- Storage Tem.: 0°C~+60°C;
- Operating Tem.: -20°C~+45°C;
- Anti-uv grade UVA-340;
- Warranty 5-year, >50000 hours (L70B10) for indoor usage
Warranty 3-year, >30000 hours (L70B10) for outdoor usage.

Spectroscopic date

Remark: Output data is from test result of 4000K neon light;
Tolerance +10%.
